

Guide for collecting Saliva for COVID-19 testing

COVID-19 symptoms in children include fever, tiredness, muscle pain, cough, sore throat, running nose and loss of the ability to smell. Testing saliva (spit) is a good way to identify COVID-19.

The kit provided makes collection safe and easy. Do **NOT** allow the person providing saliva to eat, drink, smoke or chew gum for 30 minutes before the collection. Do **NOT** remove the plastic film from the funnel lid.

<p>1. Spit to reach the fill line (bubbles don't count).</p>	
<p>2. Click close by pushing down the funnel lid.</p>	
<p>3. Unscrew the funnel from the tube.</p>	
<p>4. Use small cap to close tube tightly.</p>	
<p>5. Shake the capped tube briefly.</p>
